*Product Application Guide*  
*Commercial Guest Internet Access*

## Introduction

The future trends, the skyrocketing rise in the number of handheld devices in use, however, many places only provided wired Internet service. Once guests they need to use handheld devices like iPhone, iPad and Android smart phones to access WiFi Internet in the meeting room, office, lobby and VIP lounge, how can you satisfy their need?

## Problem Statement

Traditionally, you may put wireless access point in the meeting room and lobby. When guests visit you, they need to run wireless Internet on their laptop, tablet pc or smart phone. What's your nightmare? The reception personnel (MIS) sets up or gives new guest account laboriously every time, worries guest can see their LAN and access to Intranet and company's information will be distributed to any third parties.
